

Petroleum Training Solutions Selects Coggno for Online UST Operator Training Courses

(March 21, 2011) Petroleum Training Solutions, a leading online provider of Underground Storage Tank (UST) operator education, has teamed up with Coggno Learning Management Systems to distribute its Class C Operator training courses in preparation for the August, 2012 deadline for emergency response education. The Coggno platform was chosen for its ability to provide a universal interface to UST operators across the United States, with on-demand course offerings that give trainees the ability to complete necessary training at their convenience. A computer with a high-speed Internet connection is all that is required for individuals to access the necessary materials in order to receive important Class C training, along with Class A/B operator training whenever possible. The partnership with Coggno eliminates the need for trainees to travel, or adhere to inflexible scheduling. All training materials are available 24/7.

There are approximately 600,000 regulated underground storage tanks in the United States that require strict adherence to safety, operations, and maintenance protocols. Whenever these protocols are updated, such as the new Class C training requirement, companies would have to scramble to ensure their employees received the required updated training. Distance learning technology offered by Coggno makes it easier for companies like Petroleum Training Solutions to provide a cost-effective solution to employee training. Interactive video courses provide a quick, comprehensive means of employee education without affecting work schedules. The lively and engaging courses are designed to encourage interaction between participants, all while maintaining a relaxed atmosphere that is conducive to learning.

Petroleum Training Solutions provides high quality educational services to the petroleum UST industry. Its goal is to reduce the environmental risks posed by petroleum by offering practical, meaningful and cost-effective education. For more information, please visit their web site (www.usttraining.com).

Coggno enables all types of organizations to use technology to provide educational services through high-quality online curriculums that are universally accessible. Coggnos executive team and advisors deliver content and relevant training through state-of-the art technology that allows participants to interact with the educational vehicle. For more information, please visit Coggnos web site (www.coggno.com).
